'forelimb posture in neoceratopsian dinosaurs implications

September 29th, 2019 - ceratopsid dinosaurs traditionally have been restored with sprawling
forelimbs and were considered unable to run at high speeds an alternative view restores the
ceratopsids as rhinoceros like with parasagittal forelimb kinematics and the ability to run
faster than extant elephants'

'apatosaurus scholastic

May 30th, 2020 - apatosaurus was one of a number of giant plant eating dinosaurs that roamed
western north america during the late jurassic period more than 140 million years ago the
animal probably will remain better known for some time under the name brontosaurus because
this name has been used in many books and films about dinosaurs paleontologists use the name
apatosaurus however because the first'' modeling growth rates for sauropod dinosaurs cambridge
core

January 4th, 2020 - sauropod dinosaurs were the largest terrestrial animals and their growth
rates remain a subject of debate by counting growth lines in histologic sections and relating
bone length to body mass it has been estimated that apatosaurus attained its adult body mass
of about 25 000 kg in as little as 15 years with a maximum growth rate over 5000 kg yr this
rate exceeds that projected for a'
